

# How Do I Submit a Document for Secure Printing?

## Slide 1

The uniFLOW solution incorporates a Secure Print output function that helps prevent others from walking off with your prints before you get to the device to pick them up. To securely print a file from a PC, you must first submit the job to the uniFLOW system. Here's how.

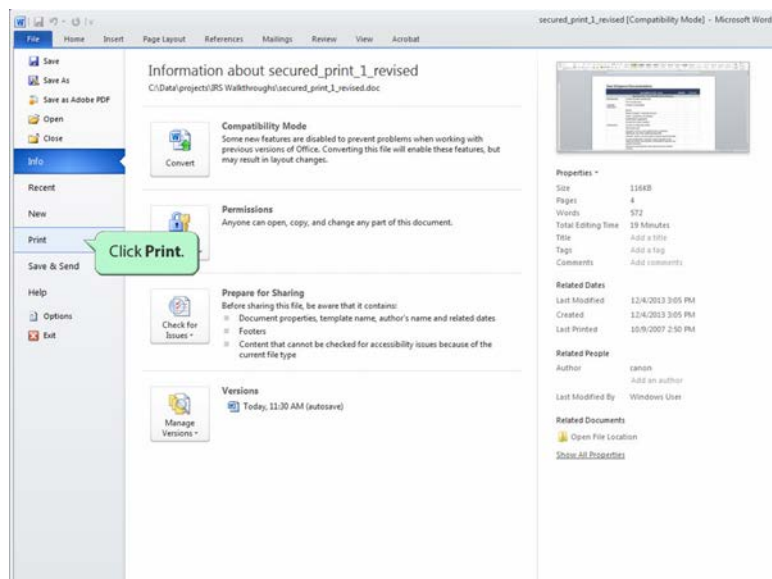

## Slide 2

To submit a job for printing, click **File...**

## Slide 3

...and then **Print** in the document's native software...

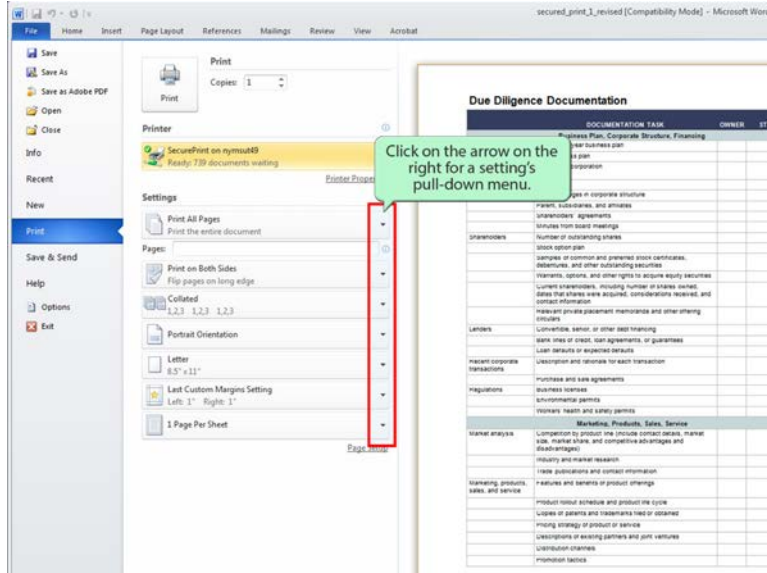

## Slide 4

... to display the print setup screen and select a Secure Print option linked to one of your office's printers.

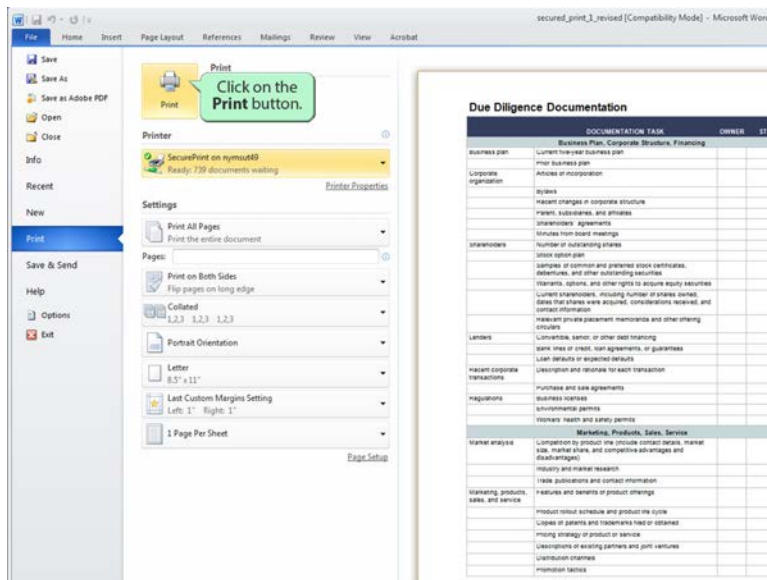

# How Do I Submit a Document for Secure Printing?

## Slide 5

To change any current print setting, click on the arrow on the right of that setting for its pulldown menu, and then make your new selection.

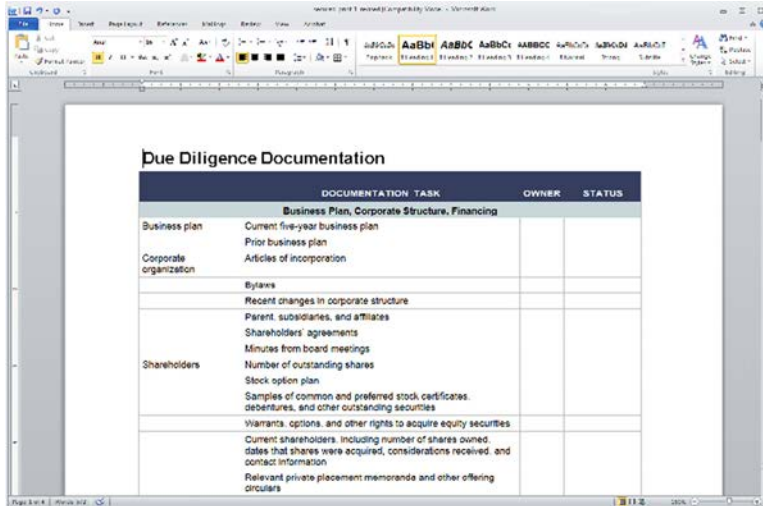

## Slide 6

When you're done, click on the **Print** button.
